Nutritional screening

Caroline Quilty RD, MSc Specialist Palliative Care Dietitian / Therapies Services Manager

Aim for this session

- What is nutritional screening?
- Why do nutritional screening?
- Nutritional Screening tools
- After nutrition screening what next?

Nutritional screening

- Nutritional screening in palliative care is an important aspect of holistic care (Shaw and Eldridge 2015).
- Organisations have a duty to safeguard service users from malnutrition and dehydration, to identify poor nutrition and dehydration with nutrition screening and to take action to treat it (DOH 2008).
- Monitored by CQC

CQC Key Lines of Enquiry

Extract from:
Assessment
framework for
healthcare services
2017 – CQC

EFFECTIVE - By effective, we mean that people's care, treatment and support achieves good outcomes, promotes a good quality of life and is based on the best available evidence.

https://www.cqc.org.uk/sites/default/files/20 170609_Healthcareservices-KLOEsprompts-andcharacteristics-FINAL.pdf

E1 Are people's needs assessed and care and treatment delivered in line with current legislation, standards and evidence-based guidance to achieve effective outcomes?

E1.5 How are people's nutrition and hydration needs (including those related to culture and religion) identified, monitored and met? Where relevant, what access is there to dietary and nutritional specialists to assist in this?

CQC Key Lines of Enquiry – Ratings Characteristics

OUTSTANDING:

There is a truly holistic approach to assessing, planning and delivering care and treatment to all people who use services. This includes addressing, where relevant, their nutrition, hydration and pain relief needs.

GOOD

..... People have comprehensive assessments of their needs, which include consideration of clinical needs (including pain relief), mental health, physical health and wellbeing, and nutrition and hydration needs ...

What is the purpose of Nutritional Screening?

To identify malnutrition which results in:

increased risk of illness and infection

Slower wound healing

Increased risks of falls

Difficulty in keeping warm

Low mood

Reduced energy levels

Reduced muscle strength

Malnutrition in Hospice Patients

Many of our patients will be undernourished due to:

- their disease
- effects of treatment
- low in mood
- generalised poor appetite for long periods of time
- cachexia

Who's responsibility is it to recognise and treat malnutrition?

Everyone's responsibility

Nutritional Screening

The basics:

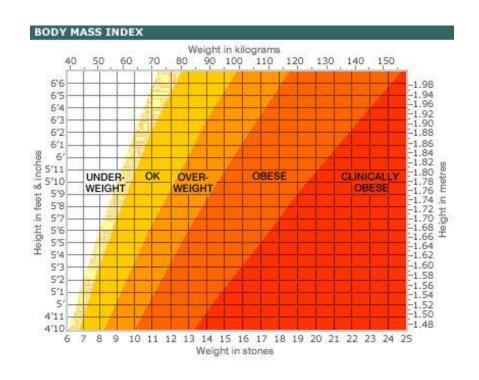

- ✓ Weight
- ✓ Height
- ✓ Body Mass Index (BMI)
- ✓ Weight Change

Body Mass Index

Body mass index (BMI) is the ratio of weight to height squared (kg/m2)

BMI 19 -25 Indicates healthy weight BMI of 18 or under indicates underweight BMI over 25 indicates over weight

Nutritional Screening

Do you have any concerns about weighing patients?

What do patients think about being weighed?

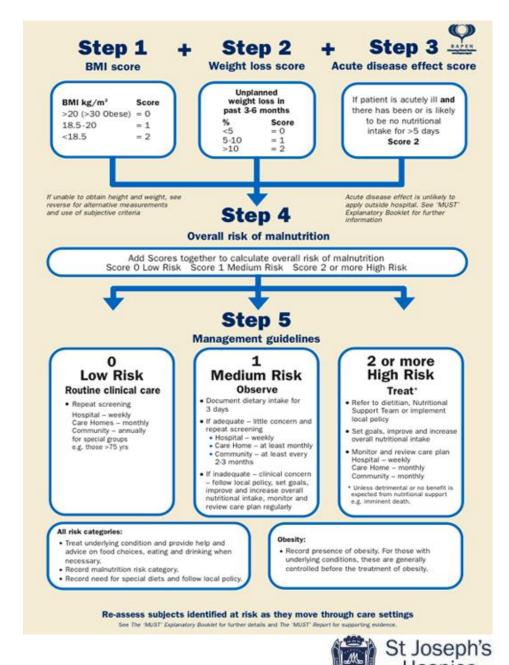

Nutritional Screening

What if you can't weigh the patient?

- Have they have been weighed recently, eg: at a clinic
- Look at the fit of clothes
- Loose rings
- Belts tightened
- Dentures loose

Malnutrition Universal Screening Tool MUST

Nutritional screening

St Joseph's Hospice Nutrition Screening Tool:- a local screening tool (Not validated)

- Weight/height/BMI
- Assess weight change in past 3-6 months
- Change in appetite
- Need for texture modification
- Use of nutritional supplements
- Artificial nutrition and hydration
- Co-morbidities
- Psychosocial impact of poor appetite.

After nutritional screening — what next?

What do you do if you identify a patient is malnourished?

When should you refer on?
